

BioFun - Captivating Games for Biofeedback, Neurofeedback and Muscle Rehabilitation

BioFun is an innovative and entertaining way to benefit from Infiniti's biofeedback technology!

BioFun Games make physiological training fun and challenging!

Travel the World

You are invited to participate in the "Fly around the World" competition; a prestigious hot air balloon race inspired by Jules Verne's classic novel.

Control a balloon with your physiology and fly over famous cities such as Vancouver, Hong Kong, Moscow, Cairo, Paris, Montreal and New York. Do not limit yourself, fly up and reach the stars!

PhysioRacer – MyoRacer – NeuroRacer

Three variations on the same theme: you guide a craft in a path using your physiology. Choose a character: a race car driver, a spy flying a stealth plane, a submarine in a secret mission, a clown fish or even a super hero!

BioFun Toy Interface*

Connect BioGraph to toys such as Raceways, electrical train or robots and use your physiology to control them.

BioFun adds excitement and challenges to your Suites:

Physiology Suite

Train to relax or take control of your HRV while flying around the world in a balloon. Drive, fly or dive and boost up your engine using physiological control.

EEG Suite & Z-Score Mini-Suite

Train your brain with NeuroRacer – a fun and engaging racing game. Provides contingent, relevant feedback, as vehicle speed, track size and obstacles are directly controlled by EEG activity. Avoid obstacles and receive points in reward conditions, while discouraging artifacts and inhibit-band activity.

Rehab Suite & Continance Suite

Fly a balloon while working your muscles. Gain control over your muscles and movements while swimming like a fish, piloting a race car, or even flying like a super hero!
